Task 1: Navigate to the AWS IAM dashboard

Procedure:
1. Log in to the AWS Management Console.
2. Search for IAM (Identity and Access Management).
3. Open the IAM dashboard.
4. Select Users from the left navigation panel.

Task 2: Create the InstaUploader IAM user

Procedure:
1. Open IAM and select Users → Create user.
2. Enter the username InstaUploader.
3. For this assignment, do not grant permissions during creation.
4. Complete the user creation process.
5. Open the user's details and look for Create access key.
6. If prompted, select the use case that matches your programmatic application.
7. Save the access key ID and secret access key securely.

Task 3: Create the ContentCreators group

Procedure:
1. Open IAM → User groups → Create group.
2. Enter ContentCreators as the group name.
3. Do not attach any permissions yet.
4. Create the group.
5. Open the group and choose Add users.
6. Select InstaUploader and confirm.

Task 4: Difference between an IAM user and an IAM role

An IAM user represents an identity that can have long-term credentials, such as a username and access keys. An IAM role is an identity with a

defined set of permissions that can be assumed temporarily by an authorized user or service. For example, a developer may use an IAM user to access AWS, while an application running on an EC2 instance assumes a role to upload images to S3. Roles help avoid storing permanent access keys in applications.
