

Task 1 — Create InstaVibeVPC

Steps

1. Log in to the AWS Management Console.
2. Search for VPC.
3. Open the VPC Dashboard.
4. Select Your VPCs.
5. Click Create VPC.
6. Select VPC only if using the manual configuration approach.
7. Enter:
 - Name tag:
 - InstaVibeVPC
 - IPv4 CIDR:
 - 10.0.0.0/16
8. Leave IPv6 disabled unless specifically required.
9. Create the VPC.

Task 2 — Create Public and Private Subnets

Inside InstaVibeVPC, create two subnets.

Public Subnet

Name: PublicSubnet-Zomato
CIDR: 10.0.1.0/24

Private Subnet

Name: PrivateSubnet-Zomato
CIDR: 10.0.2.0/24

Steps

1. Open VPC → Subnets.
2. Select Create subnet.
3. Select InstaVibeVPC.
4. Enter the public subnet details.
5. Create it.

6. Repeat for the private subnet.

Task 3 — Internet Gateway

Steps

1. Open VPC → Internet Gateways.
2. Select Create internet gateway.
3. Name it:
 - InstaVibe-IGW
4. Create it.
5. Select the newly created gateway.
6. Choose Actions → Attach to VPC.
7. Select:
 - InstaVibeVPC
8. Attach it.

Task 4 — Configure Route Tables

Public Route Table

Create a route table:

- PublicRouteTable

Associate it with:

- PublicSubnet-Zomato

Add:

- Destination: 0.0.0.0/0
- Target: InstaVibe-IGW

This sends Internet-bound traffic through the Internet Gateway.

Private Route Table

Create:

- PrivateRouteTable

Associate it with:

- PrivateSubnet-Zomato

Do not add an Internet Gateway default route.

Task 5 — VPC Diagram
