

Task 1: Upload Three Files

Create an S3 bucket such as:

- storage-lifecycle-nishit-2026

Upload:

- song.mp3
- food.jpg
- bill.pdf

Task 2: Configure Lifecycle Rules

Create two lifecycle rules.

Rule 1 – Food Image

Object:

- food.jpg

Action:

- Transition to a cheaper archival/cold storage class after 1 day.

Rule 2 – Bill

Object:

- bill.pdf

Action:

- Delete/expire after 3 days.

Task 3: Monitor Lifecycle Changes

File	Initial Storage	Lifecycle Action	Expected Result
------	-----------------	------------------	-----------------

song.mp3	S3 Standard	No rule	Remains stored
food.jpg	S3 Standard	Transition after 1 day	Moves to selected cold/archive class
bill.pdf	S3 Standard	Delete after 3 days	Object expires

Task 4: Cost Comparison

Use the AWS Pricing Calculator to compare the storage costs.

Example report:

Scenario	Storage	Estimated Monthly Cost
Without lifecycle	5 GB S3 Standard	₹_____
With lifecycle	5 GB with archival transition	₹_____
Estimated saving	—	₹_____

Task 5: MP3 Lifecycle JSON

The following is a sample S3 lifecycle configuration:

```
{
  "Rules": [
    {
      "ID": "ArchiveMP3Files",
      "Status": "Enabled",
      "Filter": {
        "Prefix": "",
        "Tag": {
          "Key": "filetype",
          "Value": "mp3"
        }
      },
      "Transitions": [
```

```
{
  "Days": 7,
  "StorageClass": "GLACIER"
},
"Expiration": {
  "Days": 30
}
]
}
```
